**[57] Abstract:**

**PROBLEM TO BE SOLVED:** To provide a solid polymer electrolyte having excellent thermal characteristics, physical characteristics, and ionic conductivity so as to be positioned on a level near to practical use, and to provide a copolymer composition used as a base material for producing the solid polymer electrolyte, especially a fully-solidified polymer electrolyte. **SOLUTION:** This solid polymer electrolyte contains a copolymer and an electrolytic salt, wherein the copolymer is composed of a block chain A having repeating units expressed by formula (I), a block chain B having repeating units expressed by formula (II) ( $R_9$  is an aryl), and a block chain C having repeating units expressed by formula (III) ( $R_{13}$  is an aryl or a heteroaryl), and the chain B, the chain A, and the chain C are arranged in this order.
